

(a) Derotation procedure

slices at different z
(phase $\phi(z)$)

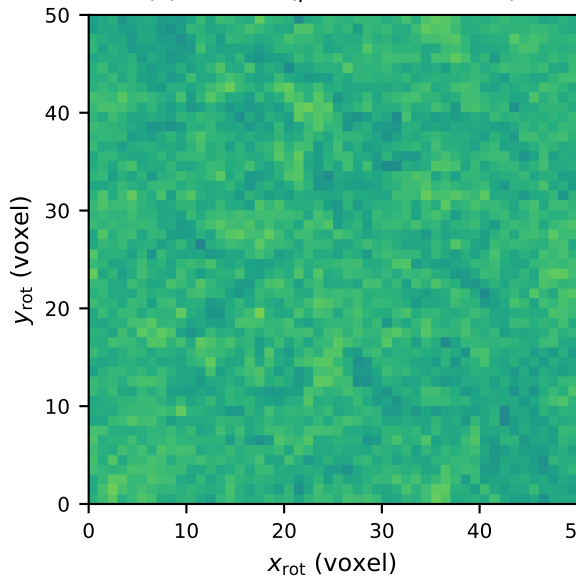

derotate
by $-\phi(z)$

common
corotating frame

average over z
 $\rightarrow M_{\text{train}}(x_{\text{rot}}, y_{\text{rot}})$

(b) $\alpha = 65^\circ$ (peak/mean = 1.25)

(c) $\alpha = 89^\circ$ (peak/mean = 6.57)
